

# Heating Systems

## First to design Infrared heating system for Brasswares

- AIPC was the pioneer, in designing the systems for Lacquer and powder curing, on Brass and Zinc items, like Door handles, Metalwares and other artistic wares. The design created by us, has been supplied to many of export oriented units manufacturing these items.
- By using our designed curing technique, finished products were able to withstand, upto 350 to 400 hrs of Salt test, which was not possible earlier.
- It has also reduced rejection rates substantially, as air was not required for initial curing stage.
